UniDevice AG in the first nine months of 2021:

Schönefeld, October 29, 2021 – Die UniDevice AG (ISIN: DE000A11QLU3) announces that disruptions in the international supply chains since mid-September have had a negative impact on business development.

Sales in the third quarter are below the same period in the previous year. In the months of July and August, the unsatisfactory delivery of iPhones could be compensated for with AirPods and other devices and a further improvement in the gross margin was achieved. In September and the first three weeks of October, the unsatisfactory delivery also occurred for other devices. For the important months of November and December, we continue to expect a difficult delivery situation.

In total, sales of EUR 268.26 million were achieved in the first nine months of 2021 (-12.1% compared to the same period in the previous year) and a net profit of EUR 2,48 million (-15.1% compared to the same period in the previous year). The cash flow was EUR +2.93 million.

The cash position was increased to EUR 3.8 million and, in conjunction with a free credit line of EUR 8.0 million, allows the business volume to be expanded if the international supply chains enable an improvement in the delivery situation.

"The dividend proposal in 2022 (from the 2021 profit) will again be 12 cents / share according to today's estimate," said Dr. Christian Pahl, CEO of UniDevice.
